

BYOD iPad – JAMF School MDM Enrolment Information

At the beginning of the school year, all new devices joining the BYOD program will be collected by the school. During this process, the **JAMF School Mobile Device Management (MDM) supervision profile** will be installed on each device. This allows the school to deploy and manage all required educational apps.

Please note:

This process will **completely wipe the device**.

It is important to understand that **you CANNOT restore a backup after JAMF School has been installed**. Any files, photos, or personal data must be saved to another device or location **before** enrolment.

Before Your iPad Can Join the MDM Program

Enrolling an iPad into the MDM program requires the device to be wiped and supervised. To ensure this process runs smoothly, please complete the following steps **prior to the installation date**:

-  **Back up your iPad** to another device or storage location
-  **Turn off “Find My iPad”**
 - If this is not disabled, the school technician will be unable to wipe or enrol the device
-  **Sign out of any Apple ID** on the iPad
-  **Remove all passcodes** from the device

Devices that do not meet these requirements **cannot be enrolled** on the day.
